

Expedited Review Request

Date: May 22, 2019

Federal Communications Commission
7435 Oakland Mills Road
Columbia MD 21046

Subject: Request for Expedited Review
FCC ID: UIDW31
Grant Date: March 1, 2019

To Whom It May Concern:

We, ARRIS, hereby request expedited review for the accompanying Class II Permissive Change application. The changes to the product operation are minimal. Specifically, we are only requesting to enable TxBF and DFS Zero Wait function.

The DFS Zero Wait function allows the product to continue transmitting on the existing channel while simultaneously performing the Channel Availability Check on a DFS channel. Once the Channel Availability Check is complete, the product may change channels without a long pause in data throughput. Further details regarding CAC duration and channel move time are provided in the included test report.

All other DFS related functions, including radar detection and channel closing time remain unchanged. Therefore, the product will continue to perform as previously demonstrated in the FCC lab on February 26, 2019.

If you should have any questions regarding this request, please don't hesitate to contact us. Thank you!

Sincerely,

Applicant : ARRIS
Address : 3871 Lakefield Drive, Suwanee, Georgia, 30024 USA
